

## **Conversion of WDP Percentages into SAT Scores**

*Use the conversions listed below to estimate SAT score equivalencies from WilsonDailyPrep performances. Please be aware that we recommend at least three months of practice in order to ensure the most accurate score conversions. All numbers below are approximations. All percentages listed are percentages INCORRECT.*

### **Critical Reading Conversion (based on overall reading score)**

**64% ~ 450**  
**53% ~ 500**  
**43% ~ 550**  
**33% ~ 600**  
**23% ~ 650**  
**15% ~ 700**

Please note that WDP scores are computed based on short reading performance only. Sentence completions are included in the calculation of actual critical reading scores. Therefore, higher sentence completion scores will increase the overall critical reading score, whereas lower sentence completion scores will decrease the overall critical reading score.

Also, for a truer indication of performance, students should email their coaches for long reading passages, as both formats are found on the SAT.

### **Writing Conversion: (based on overall grammar score)**

**60% ~ 450**  
**53% ~ 500**  
**47% ~ 550**  
**30% ~ 600**  
**13% ~ 700**

Please note that a 25-minute essay accounts for one third of the writing component score. These percentages are based upon multiple-choice performance only. Students should email their coaches for additional essay assignments and feedback to better estimate scores.

### **Math Conversion: (based on overall math score)**

**63% ~ 450**  
**53% ~ 500**  
**41% ~ 550**  
**28% ~ 600**  
**19% ~ 650**  
**9% ~ 700**

Math includes both multiple choice questions and grid-in calculations. Only multiple-choice problems are included on the program. Incorrectly answered grid-in questions have no negative impact on scoring, though. Students should email their coaches for grid-in practice.
